MICROBIOTA (METAGENOME) TEST INFORMATION AND CONSENT FORM

INFORMATION

We will obtain a stool sample to determine the genomes of the bacteria forming your gut microbiome. After extraction of the DNA of the bacteria in the sample, it will be analyzed by next generation sequencing (NGS). At the end of the analysis, the ratio and types of the bacteria in your sample will be established and their composition will be interpreted compared to the means of the population data and literature findings.

CONFIDENTIALITY

Your personal information and privacy will be protected by law.

CONSENT

After your consent, the results of the microbiota (metagenome) test will be used to make a better inference in clinical treatment processes and disease diagnosis. This situation has the potential to be beneficial in guiding the treatment of many diseases in the future. The collection, storage and processing of your data will be carried out in accordance with the law on the protection of personal data. If the data will be published in a journal, it will be treated according to the provisions of the relevant law. Your approval or disapproval of your microbiota (metagenome) test results and the use of your remaining sample will not change the quality of the service offered to you, and you will receive the same high quality service.

CONSENT FOR THE USEGA

I do accept my personal microbiota (metagenome) data results to be used for research.

I do not accept my personal microbiota (metagenome) data results to be used for research.

(In the case of not marking, you will be accepted to have approved the use of your data for research purposes)

I voluntarily agree to participate in the multiomics study to be carried out by SZAOMICS Biotechnology Research and Development within the scope of genome, transcriptome, metagenome, metabolome, lipidome and proteome without any pressure or coercion.

I read the information written for the Microbiota (Metagenome) Test and conveyed my questions and concerns to the doctor and received satisfactory answers. As a result of my conversation with my doctor, I also learned about the microbiota (metagenome) test process and learned who I can contact to get information about the genetic sequencing process.
